

### What is Offsite Data Backup you Ask?

Offsite Data Backup or (Cloud Storage) is a secure and convenient way to protect your company's priceless data. Offsite backup can be used as a primary means of data backup or as a secondary "Fail Safe" means of protecting your data. There is no costly hardware or software to purchase. Once configured, we make sure a full back up of your data is being stored safely on our servers.

### Some Key Benefits Include...

- Up to 100 GB Data Storage
- No Long Term Contracts
- 30 Day Backup History
- Data is Securely Stored Offsite
- Data is stored HIPPA Compliant
- Data is stored encrypted
- Fully automates the backup process

### What's the Cost?

You can have complete peace of mind for only **\$75 Per Month**

### Why use Offsite Data Backup?

What would happen to your business if you suffered a catastrophic data loss due to hardware failure, catastrophic disaster or possibly employee sabotage? Would you be ready and able to quickly recover or would it be a devastating blow that could possibly cost you your business? For these reasons, our newest division, Level 4 Telcom now offers secure Offsite Data Backup Services!
